(g) department

1. Find the total enrollment of each course/section/semester/year that takes place in Spring 2010.
2. Compute the total credits over all taken courses for each year.
3. For each department, find the total number of times a course was taught in that departments building by that departments teachers.
4. For each of the three semesters (Summer, Fall, Spring), output the total number of courses taught in that semester over all the years.
5. Output the name of each student and the total number of credits taken in courses that are *not* from his department.
6. What will be the output of the following SQL query:

```
SELECT section.building, sum(course.credits)
FROM section, course
WHERE section.course_id = course.course_id
GROUP BY section.building;
```
